

Salisbury Differential

Fitted as standard to the front and rear of the 109 1 ton model and to rear of 109's starting 1972, after the 109 was no longer offered for sale in North America. The Salisbury is stronger than the Rover unit and is a bolt in upgrade. Many have been added to the rear of earlier 109 Land Rovers by their owners. It is worth checking to see which differential your truck has before ordering parts.
