Ser III, 1973 and newer

Complete assembly	NLA
(recommend replacement with 532809 or RTC5523)	
Lens, red plastic	601716

European Defender style tail lamps

"These are the current Defender L.E. Perei tail light assemblies, as have been used on these models for many years. They work great on all Series rigs as an inexpensive replacement. Their plastic construction is corrosion proof, and they produce a nice bright light. They have a 2.75" base, and look very similar to the older Lucas glass 'beehive' style. They fit right in to the existing holes. The red assembly is two filament, and the clear and amber are one. The lenses are interchangeable, so you can use a two element clear on the front if you wish."

Complete assembly, red, tail & stop	RTC5523
Complete assembly, amber, turn signal	RTC5013
Complete assembly, clear, front turn or rear back-up	RTC5013
Replacement lens, red	RTC210
Replacement lens, amber	589285
Replacement lens, clear	589284

IPF Back-up Lamp

Great for early series that did not come with factory back-up lamps. Enough light that you only need one on the darkest night trails!

Single rectangular high power, low draw lamp on pedestal mount, comes as a kit with wiring, relay, fuse, and illuminated toggle switch. Clear lamp, matte black finish.

IPF back-up lamp kit	8161
